WEB AND MOBILE DEVELOPMENT

Program Curriculum

MADP 101 — Wireless & mobile technology

Designated to introduce to students the power and potential of modern wireless and mobile technology, this course will examine how they provide businesses with more flexible and inexpensive ways to send receive data.

MADP 102 — Web development for mobile devices

The world-wide web (www) is the most powerful social center in the world. This course will introduce the concepts of web development. Students will learn the basis of HTML, CSS, JAVA script, and AJAX.

MADP 103 — Rich media development

In order to become an effective web designer, one must be able to understand the concepts of graphic design and know the tools with which to design with. This course focuses on teaching students how to maximize the potential when utilizing top grade industry-popular tools such as Photoshop and Illustrator.

MADP 104 — Project management

This course serves as an introduction to the principles of project management, effectively equipping students with the proper knowledge and skills necessary for real projects in the future.

MADP 105 — Media development

Course MADP 105 will focus on examining all the techniques, theories, and skills needed to effectively develop as a social media specialist.

MADP 201 — Cross platform mobile development

In this course, students will be learning an introduction to Object Oriented programming, and the concepts behind Cross-Platform development in mobile world.

MADP 202 — JAVA development

MADP 202 will guide through and expose students to the fundamentals of Java programming and application writing. Furthermore, core object-oriented concepts will be thoroughly studied -abstraction, classes, encapsulation, methods, inheritance, objects, packages, polymorphism, properties, and more.

MADP 301 — Android app development and Android wearables

This course focuses on the Android system, setting up a development environment with virtual machine concepts and various file extensions. Topics of focus will include API levels, building blocks, filters, and UI components. The course will end with a projector for Android and a seminar on career preparation.

MADP 401 — C, objective C and SWIFT

Designed to introduce the advantage and concepts of C language. This course also comprehensively teaches how to debug and write programs with it. Students will be learning that Objective C and SWIFT support an open style of dynamic binding - a style that can accommodate a simple architecture for interactive user interfaces.

MADP 402 — iOS app development and iOS wearables

This course outlines the basics of an iPhone app, the GPS, and map kit functions. Students will learn how to publish an iPhone app onto the App Store, and the course ends with a projector for iOS system along with a seminar on career preparation.
